AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listing, of claims in the application.

- (Currently Amended) A combination of a polymeric bag and a trash can, comprising:
 the trash can having a bag engaging periphery; and
 - the polymeric bag for insertion into the trash can, the polymeric bag comprising:
 - a first panel and a second panel joined to each other along a pair of opposing sides and a <u>closed</u> bottom bridging the opposing sides creating an open top, the first and second panels each having an original width; and
 - at least a first narrowing seal extending inwardly and downwardly from near or at one of the pair of opposing sides, the first narrowing seal sealing the first panel to the second panel such that a second width of the first and second panels is created that is smaller than the original widths of the first and second panels, the second width adapted to be stretched over the bag engaging periphery of the trash can in order to allow the polymeric bag to grip the bag engaging periphery of the trash can.
- 2. (original) The polymeric bag of claim 1, further comprising a second narrowing seal extending inwardly from near or at the other of the pair of opposing sides.
- 3. (Withdrawn) The bag of claim 1, wherein the first narrowing seal further extends toward the bottom in a direction generally parallel to the pair of opposing sides.

4. (Withdrawn) The bag of claim 1, wherein the first narrowing seal further extends toward

the bottom, such that the second width becomes smaller toward the bottom.

5. (Withdrawn) The bag of claim 4, wherein the second width is about 21 inches and

gradually decreases to about 20 inches toward the bottom edges.

6. (Previously Presented) The bag of claim 1, wherein the first narrowing seal initially

extends from near or at the pair of opposing sides and extends generally downward, before

extending back to near or at one of the pair of opposing sides.

7. (Original) The bag of claim 6, wherein the first narrowing seal is arcuate or triangular in

shape.

8. (Original) The bag of claim 1, wherein the first narrowing seal is formed by heat sealing

the first and second panels.

9. (Original) The bag of claim 1, wherein the first narrowing seal is formed by adhering the

first and second panels.

10. (Original) The bag of claim 1, wherein the first and second panels are formed from an

integral folded single sheet of polymer.

11. (Original) The bag of claim 1, wherein the bottom of the bag is formed by folding the

first and second panels.

3

12. (Original) The bag of claim 1, wherein one of the pair of opposing sides of the bag is formed by folding the first and second panels.

- 13. (Original) The bag of claim 1, wherein the first and second panels are formed from two separate polymeric sheets.
- 14. (Original) The bag of claim 1, wherein the first width is about 24 inches.
- 15. (Original) The bag of claim 1, wherein the second width is about 21 inches.
- 16. (Withdrawn) A method of forming a polymeric film bag, comprising:

 providing a polymeric sheet having a length and an original width;

 folding the sheet to form a first and second panel with a straight folded bottom;

 joining the first and second panels to create an open top;

 sealing the first and second panels to create side seals; and

 forming a first narrowing seal extending inwardly and downwardly from near or at one of

 the side seals, the first narrowing seal disposed such that a second width of the

 first and second panels is created that is smaller than the original width of the
- 17. (Withdrawn) The method of claim 16, further comprising forming a second narrowing seal extending inwardly from near or at the other of the side seals.

polymeric sheet.

18. (Withdrawn) The method of claim 17, wherein the first and second narrowing seals begin a distance from the top and extend toward the bottom.

- 19. (Withdrawn) The method of claim 18, wherein the first and second narrowing seals extend generally parallel to the side seals.
- 20. (Withdrawn) The method of claim 18, wherein the distance between the first and second narrowing seals becomes smaller towards the bottom.
- 21. (Withdrawn) The method of claim 17, wherein forming the first and second narrowing seals includes forming the first and second narrowing seals at the side seals, extending the narrowing seals inwardly from the side seals, and extending the narrowing seals back to the side seals.
- 22. (Withdrawn) The method of claim 17, wherein the narrowing seals are generally arcuate or triangular in shape.
- 23. (Withdrawn) A method of forming a polymeric bag, comprising: providing first and second polymeric panels, each having a length and an original width; sealing the first and second panels along the respective lengths and along a bottom of the first and second panels, so as to form a closed bottom, closed sides, and an open top; and

forming a first narrowing seal extending inwardly and downwardly from near or at one of the sides, the first narrowing seal disposed such that a second width of the first

and second panels is created that is smaller than the original width of the first and second polymeric panels.

24. (Withdrawn) The method of claim 23, further comprising forming a second narrowing

seal extending inwardly from near or at the other of the sides.

25. (Withdrawn) The method of claim 24, wherein the first and second narrowing seals begin

a distance from the top and extend toward the bottom.

26. (Withdrawn) The method of claim 24, wherein the first and second narrowing seals

extend generally parallel to the sides.

27. (Withdrawn) The method of claim 24, wherein the distance between the first and second

narrowing seals becomes smaller towards the bottom.

28. (Withdrawn) The method of claim 24, wherein forming the first and second narrowing

seals includes forming the first and second narrowing seals at the sides, extending the narrowing

seals inwardly from the sides, and extending the narrowing seals back to the sides.

29. (Withdrawn) A polymeric film bag, comprising:

a first layer and a second layer each having an original width and a length, the first and

second layer joined by a pair of opposing bag sides and a straight bottom;

a first narrowing seal sealing the first layer to the second layer; and

a second narrowing seal sealing the first layer to the second layer, the first and second narrowing seals disposed such that a second width of the first and second layers is created that is smaller than the original widths of the first and second layers, the first and second narrowing seals extending inwardly from near or at the side edges and extending down toward the straight bottom, such that the second width becomes smaller towards the straight bottom.

- 30. (Currently Amended) A polymeric bag and a container in combination, comprising: the container having a fixed frame and a bag engaging periphery; the bag comprising:
 - a first layer and a second layer each having an original width and a length, the first and second layer joined by a pair of opposing bag sides and a <u>closed</u> bottom bridging the opposing bag sides, creating an open top;

a first narrowing seal sealing the first layer to the second layer; and

- a second narrowing seal sealing the first layer to the second layer, the first and second narrowing seals disposed such that a second width of the first and second layers is created that is smaller than the original widths of the first and second layers, the first and second narrowing seals initially extending from said bag sides and extending generally downwardly before extending back to said bag sides, the second width adapted to be stretched over the bag engaging periphery of the container in order to allow the polymeric bag to grip the bag engaging periphery of the container.
- 31. (Currently Amended) A polymeric bag and container in combination, comprising:

said container having a fixed shape frame and a bag engaging periphery; and said bag comprising:

- a first panel and a second panel joined to each other along a pair of opposing sides and a <u>closed</u> bottom bridging the opposing sides, creating an open top, the first and second panels each having an original width; and
- at least a first narrowing seal extending inwardly and downwardly from near or at one of the pair of opposing sides, the first narrowing seal sealing the first panel to the second panel such that a second width of the first and second panels is created that is smaller than the original widths of the first and second panels, the second width adapted to be stretched over the bag engaging periphery of said container in order to allow the polymeric bag to grip the bag engaging periphery of the container.
- 32. (original) The polymeric bag of claim 31, further comprising a second narrowing seal extending inwardly from near or at the other of the pair of opposing sides.
- 33. (Withdrawn) The bag of claim 31, wherein the first narrowing seal further extends toward the bottom in a direction generally parallel to the pair of opposing sides.
- 34. (Withdrawn) The bag of claim 31, wherein the first narrowing seal further extends toward the bottom, such that the second width becomes smaller toward the bottom.
- 35. (Withdrawn) The bag of claim 34, wherein the second width is about 21 inches and gradually decreases to about 20 inches toward the bottom edges.

36. (Original) The bag of claim 31, wherein the first narrowing seal initially extends from the

pair of opposing sides and extends generally downward, before extending back to one of the pair

of opposing sides.

37. (Original) The bag of claim 36, wherein the first narrowing seal is arcuate or triangular in

shape.

38. (Original) The bag of claim 31, wherein the first narrowing seal is formed by heat sealing

the first and second panels.

39. (Original) The bag of claim 31, wherein the first narrowing seal is formed by adhering

the first and second panels.

40. (Original) The bag of claim 31, wherein the first and second panels are formed from an

integral folded single sheet of polymer.

41. (Original) The bag of claim 31, wherein the bottom of the bag is formed by folding the

first and second panels.

42. (Original) The bag of claim 31, wherein one of the pair of opposing sides of the bag is

formed by folding the first and second panels.

9

43. (Original) The bag of claim 31, wherein the first and second panels are formed from two separate polymeric sheets.

- 44. (Withdrawn) A polymeric film bag and container in combination, comprising: said container having a fixed shaped frame and a bag engaging periphery; and said bag comprising:
 - a first layer and a second layer each having an original width and a length, the first and second layer joined by a pair of opposing bag sides and a straight bottom;
 - a first narrowing seal sealing the first layer to the second layer; and
 - a second narrowing seal sealing the first layer to the second layer, the first and second narrowing seals disposed such that a second width of the first and second layers is created that is smaller than the original widths of the first and second layers, the first and second narrowing seals extending inwardly from near or at the side edges and extending down toward the straight bottom, such that the second width becomes smaller toward the straight bottom
- 45. (Currently Amended) A polymeric bag and container in combination, comprising: said container having a fixed shape frame and a bag engaging periphery; and said bag comprising:
 - a first layer and a second layer each having an original width and a length, the first and second layer joined by a pair of opposing bag sides and a straight, closed bottom, creating an open top;

a first narrowing seal sealing the first layer to the second layer; and

a second narrowing seal sealing the first layer to the second layer, the first and second narrowing seals disposed such that a second width of the first and second layers is created that is smaller than the original widths of the first and second layers, the first and second narrowing seals initially extending from said bag sides and extending generally downwardly before extending back to said bag sides, the second width adapted to be stretched over the bag engaging periphery of the container in order to allow the polymeric bag to grip the bag engaging periphery of the container.

- 46. (Previously Presented) The bag of claim 1, wherein the bottom is a straight bottom.
- 47. (Cancelled)
